Nature
Foundation

The problem

Habitat loss and land clearing has caused the extinction of 62 Australian terrestrial species. Between 2000 and 2017, over 7.7 million hectares of land habitat was cleared in Australia.*

The compounding impacts of climate change will likely cause a further decline in Australia's biodiversity, with increasing numbers of species and ecological communities being listed as threatened across the country.

Nature and its life-support system is critical for human survival providing food, water, climate regulation and well-being for all society.

Nature Foundation's Mission

- Nature Foundation was founded over 40 years ago with the simple mission to save, protect and restore Australian landscapes for future generations.
- We privately manage nature reserves and currently provide over 500 000 hectares of critical refuges for Australian flora and fauna.
- Our work is underpinned by our commitment to nature science, ensuring that we implement adaptive and effective ecological management and monitoring practices.

Investing in protected and conserved areas is investing in our future.

- Protected areas are vital refuges for threatened species and ecosystems.
- Effective protected area management has positive outcomes for biodiversity.

Our vision

- To realise a nature-positive future where biodiversity is secure, and our life-support system is thriving forever, Nature Foundation aims to purchase land with high biodiversity value to create more critical refuges for Australian wildlife.
- We have set an ambitious target to double our impact to 1 million hectares by 2030 – in support of Australia's commitment to 30 per cent of land and sea protected by 2030.

**If we act now and work together,
we are powerful enough to
change the future forever.**

—INTRODUCING THE

Forever Nature Fund

The Forever Nature Fund has been created for the purpose of raising capital to purchase and manage areas of critical habitat, that are prioritised using data driven scientific and environmental assessment tools.

The Fund will enable Nature Foundation's team to act quickly and decisively when a property of high conservation value is available for purchase.

The Forever Nature Fund will be professionally managed by an external fund manager in accordance with Nature Foundation's Financial Management and Investment policy. The funds invested will be diversified by asset class and by security to achieve long term financial goals of growth and return, while managing risk. Investments will be excluded that conflict with the organisation's purpose and values, including Environmental, Social and Governance principles.

Our ambitious target is \$20m by 2030 to enable land acquisition at scale that provides high impact and contributes to a nature-positive future.

How to Contribute

We ask you to consider investing in the Forever Nature Fund and help protect habitat and wildlife today, tomorrow and forever.

You can contribute to the Forever Nature Fund by a major gift, regular giving, one-off donation or through a gift in your Will.

Benefactor benefits and recognition are tailored to individual contributions.

Benefactor levels:

- **Inspirational Benefactor:** \$1,000,000 +
- **Leading Benefactor:** \$100,000 +
- **Major Benefactor:** \$10,000 +

A contribution may be named (upon request) to recognise a benefactor.
